

Lab 04 — Q*bert Repair Lab

Implementation Notes

Task 1 — Fix pyramid projection

Changed the row offset in cube projection to use true division so rows are horizontally centered.

Task 2 — Add level colour palettes

The palette helper selects a palette with `palettes[(level - 1) % len(palettes)]`, cycling through the configured palettes.

Task 3 — Add cube completion flash

When a cube is completed, its cell is stored in `COMPLETION_FLASHES` with an expiry timestamp; drawing code uses it for brief feedback.

Task 4 — Add bonus life threshold

The bonus-life threshold helper returns 1000; existing score bookkeeping uses this threshold to award extra lives.

Verification

These are implementation notes prepared from the supplied completed source and README. The game was not run in this environment. No gameplay videos were recorded. This document is not a record of a full chat transcript or proof of runtime behaviour.
